Cloud Attack Report

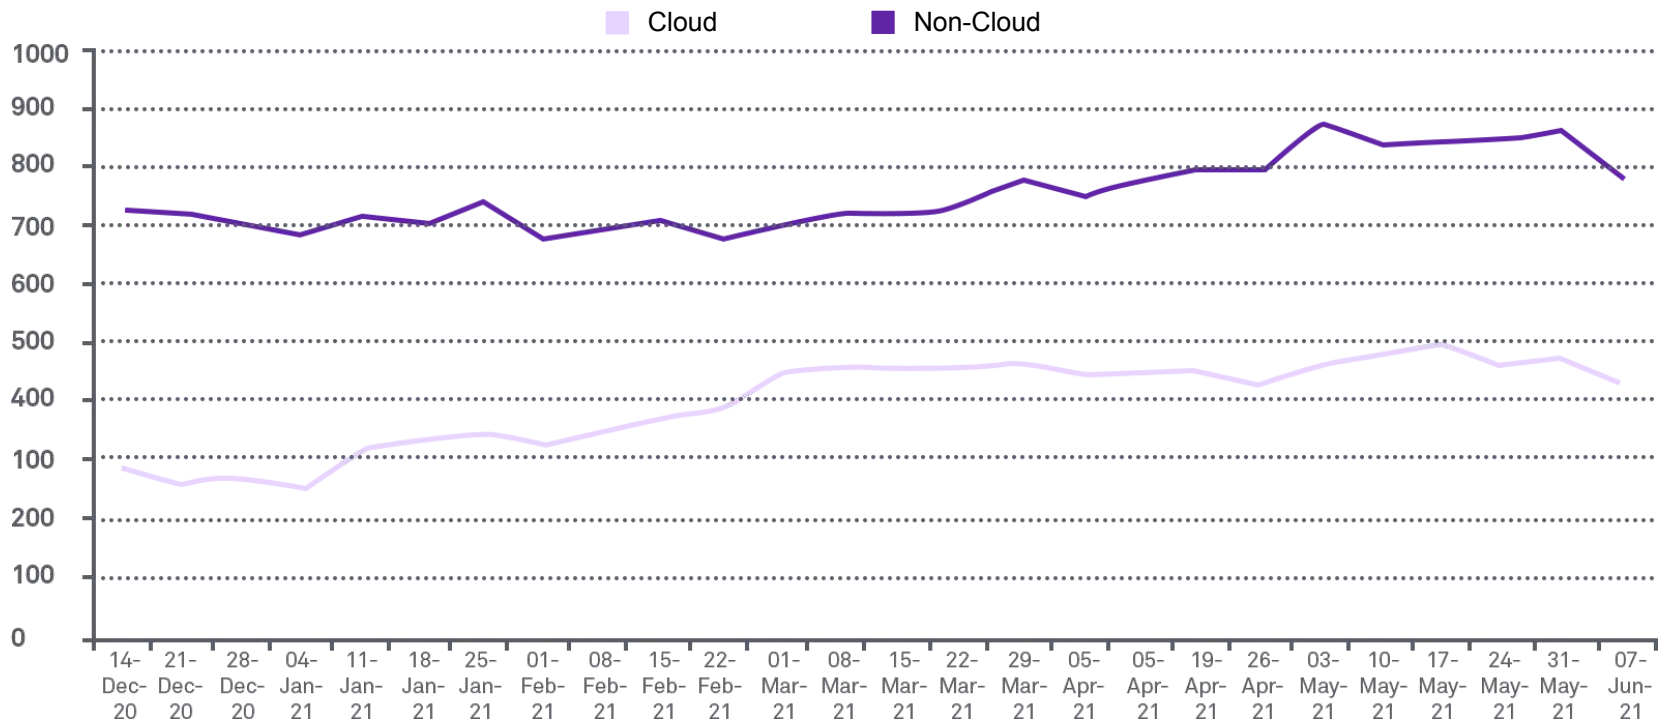

Cloud Summary Data

- **82%** of Cloud based networks suffered from Vulnerability Exploit attacks (IPS).
- **67%** of Cloud based networks suffered from Malware attacks (AV, AB, TE).

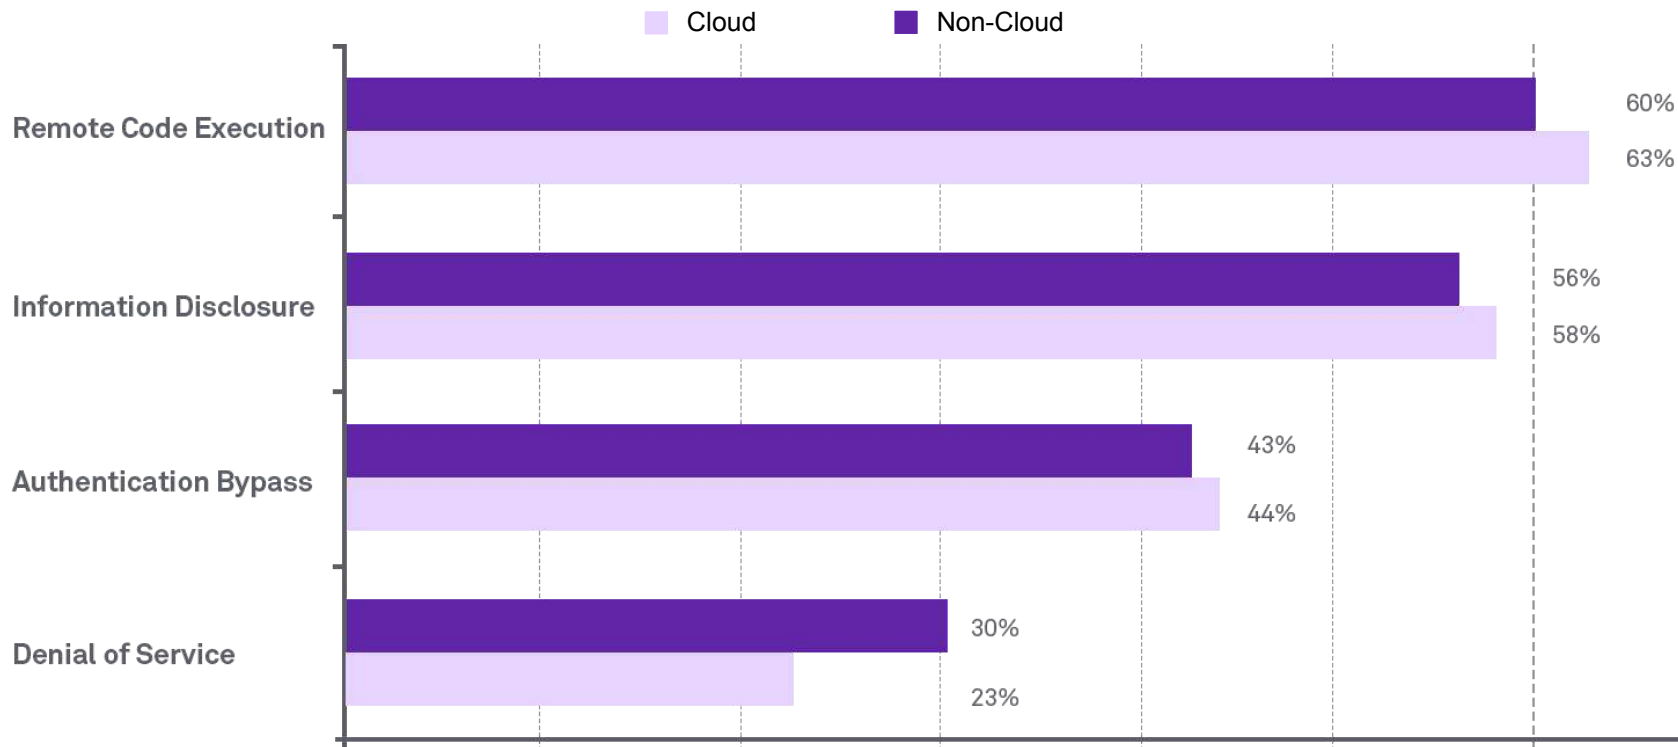

Major Cloud Attacks

- 05-2021 - Check Point Research has analyzed and enumerated over public AWS Systems Manager (SSM) documents, finding documents misconfigured to be publically shared, containing over five million personally identifiable information records and credit card transactions of companies, including a global sportswear manufacturer.
- 05-2021 - Elekta, a Swedish provider of oncology and radiology systems, has suffered a ransomware attack that has led to the takedown of its cloud storage systems. The attack has caused disruptions and delays in the cancer treatments given at Yale New Haven Health, an Elekta client, among other US customers.
- 05-2021 - The FBI and CISA has issued a review of cyber-attack activities run by the Foreign Intelligence Service of Russia, known as SVR, against the US and allied countries. The SVR has been focusing on Cloud environment targets since 2018, and heavily relies on false identities and cryptocurrency transactions.
